For Kids Who Need Extra Protection From Cavities

Just For Kids™ 0.4% Stannous Fluoride Preventive Treatment Gel, provides extra protection for children who have a history of cavities, as well as those living in areas with less than optimal fluoride levels in their drinking water. Many studies have proven

that 0.4% Stannous Fluoride is very effective in the fight against decay! Just For Kids gel is available in three great tasting flavors. Your children will actually look forward to brushing their teeth. Now that's a concept any parent can appreciate!

Your exam has revealed the following:

- ✓ Cavities
- ✓ Plaque build-up
- ✓ Bleeding gums
- ✓ Decalcification
- ✓ Gum inflammation

Comments:

Tips/Guidelines To Establish Proper Brushing, Rinsing and Flossing Techniques

- ✓ You are the most important factor in guiding your children to the lifelong habit of proper oral hygiene. Your children's brushing and rinsing should be supervised by you until they develop the dexterity to properly handle the routine, around 6 years of age.
- ✓ Start your children's regular dental visits soon after their first tooth appears. It is important for their oral health to maintain a minimum of two visits per year.
- ✓ Supervise your children's brushing and rinsing at least twice daily: after breakfast and prior to bed.
- ✓ Once a day, floss between any of your children's teeth that come in contact with adjacent teeth. Continue flossing your children's teeth until they are able to effectively floss themselves.
- ✓ Toothpaste, rinses and gels like Just For Kids gel should not be swallowed by your child. Teach your children how to expectorate (spit) any residue remaining in their mouth. If necessary, use gauze or a washcloth to remove any excess they are unable to expel.
- ✓ Use only a "pea-sized" (.25g) amount of any toothpaste or gel for your children. Seek advice from your Dental Professional regarding use for children under 6 years old.
- ✓ Use a child-sized soft bristled toothbrush only. Use small circular brush strokes when brushing your children's teeth. Thoroughly rinse the toothbrush after each use. The toothbrush can harbor microorganisms which can infect your children. Never let your family members share toothbrushes. Discard and replace your child's toothbrush regularly.
- ✓ Have your primary drinking water tested for fluoride content. Your Dental Professional will use this information to advise if you need fluoride supplements, in the form of drops or tablets, for your children.
- ✓ Dental sealants can be very effective in preventing tooth decay. Ask your Dental Professional about this procedure.
- ✓ Infants should not nap or sleep at night with a bottle. Also, eliminate snacks containing sugar prior to naps and bedtime.
